BOLTING ON BRILLIANCE.

MECOMS™ is the go to business support system for energy providers and utility companies. Recommended by Microsoft and endorsed by impartial analyst houses, Gartner, OVUM and IDC, MECOMS empowers businesses to streamline business processes, deliver enhanced customer service and reduce cost.

As part of Ferranti Computer Systems' commitment to embracing innovation and continually enhancing its offering to customers, Lasernet functionality is now available as standard within the MECOMS platform.

So what does this mean? Put simply, with the Lasernet module now available, users will be able to quickly create, modify, control, disseminate and archive branded documentation across an entire organisation. Incorporating drag-and-drop functionality and compatible with all formats, Lasetnet creates perfectly arranged, bespoke layouts for print and electronic distribution and promotes easier maintenance of a company's visual identity. Additionally, integration with MECOMS is preconfigured, resulting in speedy deployment. Just plug it in and start playing.

MECOMS[™]
developed by Ferranti Computer Systems

GET YOUR HEAD IN THE CLOUD.

MECOMS as a Service (MAAS) provides the power and flexibility of an onsite MECOMS installation but is deployed, hosted and maintained in the cloud. Freeing up time and IT resource for customers and transferring the burden of IT management to a trusted partner. Lasernet fully supports the MAAS cloud environment, is quick and simple to deploy and boasts standardised integration.

KEY FEATURES AND BENEFITS.

SAVE MONEY.

Save money on all business processes related to the conversion and communication of business documents, across all formats.

MOVE TO DIGITAL.

Move your organisation from paper-based routines towards an e-document culture. Remove your reliance of paper, printers, toners, envelopes and stamps, and say hello to the digital formats that are required in your industry and by your customers.

SAVE TIME.

Navigate quickly through your next MECOMS upgrade project. Take the entire business document part out of your next MECOMS upgrade, keep the business logic in Lasernet and the lasernet connector to help save you hundreds of consultancy hours.

FOCUS BRANDING.

Strengthen your corporate image so that all your communication is consistent and professional. It has never been easier to change logos, fonts and general design on your business documents.

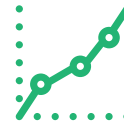

SECURE CONTROL.

Take back control by being able to check in and check out documents on different Lasernetet servers, and achieve complete control of who edits and publishes each business document.

ARCHIVE.

Find your documents quickly and easily. You can use Lasetnet to archive and resend your business documents.

ENHANCE REPORTS.

Provide a close integration with your MECOMS system. We have developed specific add-on modules for Microsoft Dynamics AX that enhances report creation and business document design processes, directly from your MECOMS system.

THE SCIENCE BIT.

With the Lasernet connector, the need to programme with SSRS reports is removed. This reduces complexity whilst enables deep integration in the Microsoft Dynamic AX environment. Rendering can be created through SSRS or directly without SSRS empowering organisational efficiency.

When installed, the Lasetnet module gives you access to a long range of preprogrammed menus and templates as well as a user interface in Microsoft Dynamics AX:

- A preview-function that makes it possible to view the documents before updating and sending them
- File archive for printed documents that can be opened and read directly from Microsoft Dynamics AX
- The ability to employ many different output channels (paper, e-mail, fax, XML, UBL, PDF, etc.)
- Handling of document distribution through Microsoft Dynamics AX to ensure that customer A can receive a fax while customer B gets a PDF file attached to an e-mail
- Business logic stays in Microsoft Dynamics AX, making upgrades easy

TRIED AND TESTED.

Lasernet technology has been creating streamlined, cost effective document management processes for over 20 years. Used by 2,500 customers worldwide, Lasernet technology is tried and tested.

“There were many reasons we selected Lasernet specifically. It was clear that Formpipe was doing everything we would want to do with software of this kind. They already work with many of our partners and customers, have the best integration with AX and Ferranti platforms, and are an active part of the Microsoft ecosystem.”

MECOMS™ product manager Leslie De Cuyper

THE MICROSOFT SEAL OF APPROVAL.

As a Microsoft Gold Partner and one of the newest members of Microsoft's Technology Adoption Program (TAP) - which enables Lasetnet to collaborate with Microsoft to provide 'early adopter' feedback on a range of Microsoft product updates - Lasetnet is at the forefront of global technology innovation. Recognised for its seamless integration with Microsoft Dynamics AX, as part of the TAP scheme, Lasetnet will trial and test the new versions of the leading ERP system prior to official release.
